# Saeco Idea Cappuccino Machine

*(Medium to large sized offices)*

## Coffee Machine Description

The Saeco Idea Cappuccino is a larger machine suiting medium to large size businesses. It is as easy to use as pressing a button and makes a perfect cup of coffee everytime.

This coffee machine is fully automated as it grinds our freshly roasted coffee beans, doses the perfect amount of ground coffee, tamps, and dispenses espresso coffee straight to your cup, and discards used grounds into an internal box - all with just the push of a button!

The Saeco Idea Cappuccino's main feature is the automatic "Cappuccinatore" which takes the milk directly from the bottle, heating it and transforming it into a thick creamy foam. This is built-in in the dispenser and comes with a sanitizer that automates the cleaning process for each single use.

Both coffee and milk are dispensed at the same time for maximum convenience.

The Saeco Idea Cappuccino comes with a twin boiler (coffee boiler and hot water / steam boiler) and has 3 water circuits: 1 coffee circuit, 1 for hot water heated with independent heat exchangers attached to the boiler and 1 steam circuit. This gives improved brewing of steam, hot water and coffee.

The Saeco Idea Cappuccino machine is suited to larger user environments with 70+ coffee drinkers.

## Coffee Machine Features

**Cup Warming Surface**

**Coffee Dosage Adjustment**
Gives you total control over your coffee's taste

**Dose Pre-grinding**

**Hot Water Nozzle**
Perfect for non-coffee drinkers
