

## Saeco Royal Cappuccino Machine

*Small to medium sized offices*

---

### Coffee Machine Description

---

The Saeco Royal Cappuccino is perfect for small to medium size businesses. It is so easy to use and makes a perfect cup of coffee everytime.

This coffee machine grinds our freshly roasted coffee beans, doses the perfect amount of ground coffee, tamps, and dispenses espresso coffee straight to your cup, and discards used grounds into an internal box - all with just the push of a button!

Heating and frothing your milk has never been easier either. The automatic "Cappuccinatore" takes the milk directly from the bottle heating it and transforming it into a thick creamy foam. Alternatively, you can manually steam the milk yourself with the steam wand.

The Saeco Royal Cappuccino features a twin boiler (coffee boiler and hot water / steam boiler) allowing the simultaneous preparation of milk froth and coffee for maximum convenience.

Users of the Saeco Royal Cappuccino include offices (of all descriptions), hairdressers, banks, car dealerships, school staff rooms and canteens, sporting clubs, real estates, travel agents and retail outlets.
